

PRAKTIK PER. 7

Langkah 1: Setup Project dan Dependencies

```
npm create vite@latest praktik-8 -- --template react
```

```
npm install
```

```
npm install react-router-dom
```

Dalam praktik ini, Anda akan membangun aplikasi sederhana dengan multiple "halaman" menggunakan React Router. Kita akan membuat:

1. **Struktur Navigasi Dasar:** Header dengan menu navigasi
2. **Multiple Routes:** Home, About, Products, Contact
3. **Dynamic Routes:** Detail produk dengan parameter
4. **Programmatic Navigation:** Redirect setelah form submission
5. **Nested Routes:** Layout konsisten antar halaman

Anda akan menggunakan komponen-komponen React Router untuk membuat pengalaman navigasi yang smooth tanpa page reload.

Langkah 2 : src/pages/Home.jsx

```
// File: src/pages/Home.jsx
import React from 'react';
import { Link } from 'react-router-dom';

const Home = () => {
  return (
    <div className="page home-page">
      <h1>127968; Welcome to Our Website</h1>
      <p>Ini adalah halaman home menggunakan React Router</p>

      <div className="feature-cards">
        <div className="card">
          <h3>128214; About Us</h3>
          <p>Pelajari lebih lanjut tentang perusahaan kami</p>
          <Link to="/about" className="btn btn-primary">
            Learn More
          </Link>
        </div>

        <div className="card">
          <h3>128717; Products</h3>
          <p>Jelajahi koleksi produk kami</p>
          <Link to="/products" className="btn btn-primary">
            View Products
          </Link>
        </div>

        <div className="card">
          <h3>128222; Contact</h3>
          <p>Hubungi kami untuk informasi lebih lanjut</p>
          <Link to="/contact" className="btn btn-primary">
            Get in Touch
          </Link>
        </div>
      </div>
    </div>
  );
};

export default Home;
```

Langkah 3 : src/pages/About.jsx

```
// File: src/pages/About.jsx
import React from 'react';

const About = () => {
  return (
    <div className="page about-page">
      <h1>About Us</h1>
      <div className="about-content">
        <section>
          <h2>Our Story</h2>
          <p>
            Kami adalah perusahaan yang berdedikasi untuk memberikan solusi terbaik menggunakan teknologi modern.
          </p>
        </section>

        <section>
          <h2>Our Mission</h2>
          <p>
            Menyediakan pengalaman pengguna yang luar biasa melalui aplikasi web yang inovatif.
          </p>
        </section>

        <section>
          <h2>Technology Stack</h2>
          <ul>
            <li>React JS</li>
            <li>React Router</li>
            <li>Modern CSS</li>
            <li>Responsive Design</li>
          </ul>
        </section>
      </div>
    </div>
  );
};

export default About;
```

Langkah 4 : src/pages/Products.jsx

```
// File: src/pages/Products.jsx
import React from 'react';
import { Link } from 'react-router-dom';

const Products = () => {
    // Data produk dummy
    const products = [
        { id: 1, name: 'Laptop', price: 12000000, category: 'Electronics' },
        { id: 2, name: 'Smartphone', price: 5000000, category: 'Electronics' },
        { id: 3, name: 'Headphones', price: 800000, category: 'Electronics' },
        { id: 4, name: 'Book', price: 150000, category: 'Education' },
        { id: 5, name: 'Desk Lamp', price: 300000, category: 'Home' },
    ];

    return (
        <div className="page products-page">
            <h1>&#128717;&#65039; Our Products</h1>
            <p>Jelajahi berbagai produk yang kami tawarkan</p>

            <div className="products-grid">
                {products.map(product => (
                    <div key={product.id} className="product-card">
                        <h3>{product.name}</h3>
                        <p className="price">Rp {product.price.toLocaleString('id-ID')}</p>
                        <p className="category">{product.category}</p>
                        <Link
                            to={`/products/${product.id}`}
                            className="btn btn-secondary"
                        >
                            View Details
                        </Link>
                    </div>
                ))}
            </div>
        </div>
    );
};

export default Products;
```

Langkah 5 : src/pages/Contact.jsx

```
// File: src/pages/Contact.jsx
import React, { useState } from 'react';
import { useNavigate } from 'react-router-dom';

const Contact = () => {
  const navigate = useNavigate();
  const [formData, setFormData] = useState({
    name: '',
    email: '',
    message: ''
  });

  const handleChange = (e) => {
    const { name, value } = e.target;
    setFormData(prev => ({
      ...prev,
      [name]: value
    }));
  };

  const handleSubmit = (e) => {
    e.preventDefault();

    // Simulasi pengiriman form
    alert('Terima kasih! Pesan Anda telah dikirim.');

    // Redirect ke halaman home setelah submit
    navigate('/');
  };

  return (
    <div className="page contact-page">
      <h1>✉️ Contact Us</h1>

      <div className="contact-content">
        <div className="contact-info">
          <h2>Get in Touch</h2>
          <p>Email: info@myapp.com</p>
          <p>Phone: +62 812-3456-7890</p>
          <p>Address: Jakarta, Indonesia</p>
        </div>

        <form onSubmit={handleSubmit} className="contact-form">
          <div className="form-group">
            <label htmlFor="name">Name:</label>
            <input
              type="text"
              id="name"
              name="name"
              value={formData.name}
              onChange={handleChange}
              required
            />
          </div>
        </form>
      </div>
    </div>
  );
}

export default Contact;
```

```
        
```

```
    </div>

    <div className="form-group">
      <label htmlFor="email">Email:</label>
      <input
        type="email"
        id="email"
        name="email"
        value={formData.email}
        onChange={handleChange}
        required
      />
    </div>

    <div className="form-group">
      <label htmlFor="message">Message:</label>
      <textarea
        id="message"
        name="message"
        value={formData.message}
        onChange={handleChange}
        rows="5"
        required
      ></textarea>
    </div>

    <button type="submit" className="btn btn-primary">
      Send Message
    </button>
  </form>
</div>
</div>
);

};

export default Contact;
```

Langkah 6 : src/components/Navitation.jsx

```
// File: src/components/Navigation.jsx
import React from 'react';
import { Link, useLocation } from 'react-router-dom';

const Navigation = () => {
  const location = useLocation();

  // Function untuk mengecek apakah link aktif
  const isActive = (path) => {
    return location.pathname === path;
  };

  return (
    <nav className="navigation">
      <div className="nav-brand">
        <Link to="/">MyApp</Link>
      </div>

      <ul className="nav-links">
        <li>
          <Link
            to="/"
            className={isActive('/') ? 'active' : ''}>
            Home
          </Link>
        </li>
        <li>
          <Link
            to="/about"
            className={isActive('/about') ? 'active' : ''}>
            About
          </Link>
        </li>
        <li>
          <Link
            to="/products"
            className={isActive('/products') ? 'active' : ''}>
            Products
          </Link>
        </li>
        <li>
          <Link
            to="/contact"
            className={isActive('/contact') ? 'active' : ''}>
            Contact
          </Link>
        </li>
      </ul>
    </nav>
  );
}
```

```
    );
}

export default Navigation;
```

Langkah 7 : src/components/Layout.jsx

```
// File: src/components/Layout.jsx
import React from 'react';
import { Outlet } from 'react-router-dom';
import Navigation from './Navigation';

const Layout = () => {
  return (
    <div className="app">
      {/* Navigation component yang muncul di semua halaman */}
      <Navigation />

      {/* Main content area - akan diisi oleh route yang aktif */}
      <main className="main-content">
        <Outlet />
      </main>

      {/* Footer */}
      <footer className="footer">
        <p>&copy; 2024 My React App. Pertemuan 8 - React Router</p>
      </footer>
    </div>
  );
};

export default Layout;
```

Langkah 8 : src/App.jsx

```
// File: src/App.jsx
import React from 'react';
import { BrowserRouter, Routes, Route } from 'react-router-dom';
import Layout from './components/Layout';
import Home from './pages/Home';
import About from './pages/About';
import Products from './pages/Products';
import ProductDetail from './pages/ProductDetail';
import Contact from './pages/Contact';
import NotFound from './pages/NotFound';
import './App.css';

function App() {
  return (
    <BrowserRouter>
      <Routes>
        {/* Layout wrapper untuk semua halaman */}
        <Route path="/" element={<Layout />}>
          <Route index element={<Home />} />
          <Route path="about" element={<About />} />
          <Route path="products" element={<Products />} />
          <Route path="products/:id" element={<ProductDetail />} />
          <Route path="contact" element={<Contact />} />
          <Route path="*" element={<NotFound />} />
        </Route>
      </Routes>
    </BrowserRouter>
  );
}

export default App;
```

Langkah 8 : src/App.css

```
/* File: src/App.css */
* {
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

body {
